PROJECT DETAILS

PROJECT1: Delay Analysis and Optimality of Scheduling Policies for Multi-Hop Wireless Networks. We analyze the delay performance of a multi-hop wireless network in which the routes between source-destination pairs are fixed. We develop a new queue grouping technique to handle the complex correlations of the service process resulting from the multi-hop nature of the flows and their mutual sharing of the wireless medium. A general set based interference model is assumed that imposes constraints on links that can be served simultaneously at any given time.

Tools : Java, java swings, J2SE, html, JavaScript

PROJECT2: It is an ONLINE COMMUNITY PROJECT, with title "MINGLESPOT" where different users who register online with their own account .There are different users who interacting and maintain their own list of friends. The users may post their questions and any one can answers to the questions. I developed this project using java servlets as platform and MYSQL as Database.
